Stata to CSV Conversion File

Jake Chanenson

5/2/2024

I've written this file to look in the same folder as the folder that the script is in and check to see if there are any stata files. If there are the script will read in the stata file and then write it to csv (which can be opened by Excel).

```
library(haven)
```

```
## Warning: package 'haven' was built under R version 4.5.3
```

```
# Get the path to the current directory
current_dir <- dirname(rstudioapi::getActiveDocumentContext()$path)

# List all files in the current directory
files <- list.files(current_dir)

# Look for Stata files
stata_files <- files[grep("\\.dta$", files)]

if (length(stata_files) > 0) {
  # If at least one Stata file is found, read in the first one
  stata_file <- file.path(current_dir, stata_files[1])
  data <- read_dta(stata_file)

  # Define the path for the CSV file
  csv_file <- file.path(current_dir, paste0(tools::file_path_sans_ext(stata_files[1]), ".csv"))

  # Write the data to CSV
  write.csv(data, file = csv_file, row.names = FALSE)

  cat("Stata file has been successfully converted to CSV:", csv_file, "\n")
} else {
  cat("No Stata file found in the current directory.\n")
}
```

```
## No Stata file found in the current directory.
```
